

# COMPASS Update

## ATTN: DCMC PHYSICIANS COMPASS Improvements Made in Dec.

### Information for All Physicians

#### New Orders

- New US Retroperitoneal Complete radiology order.

#### Changes to Existing Orders

- A *Cystic Fibrosis* result will now appear as part of the Newborn Screen order on the Flowsheet.

#### Med Administration

- Medication upon Admission lists now include:
  - Name of the clinician who last updated each medication
  - Title of the clinician
  - Date and time the information was entered or verified

To remove a medication from the list, please enter an order in the New Orders section at the bottom of the Medication upon Admission list so that Pharmacy can correct the home medication list. For more information, go to [www.doctors.seton.net](http://www.doctors.seton.net) or contact [cmullins@seton.org](mailto:cmullins@seton.org) or [pgarrett@seton.org](mailto:pgarrett@seton.org)

#### Miscellaneous

- MediSource, one of the online drug references available through COMPASS, was discontinued. MediSource has been rarely accessed by clinicians since LexiComp, a more comprehensive online drug reference updated much more frequently, was made available.
- On the Flowsheet, MTHFR results have been moved from the Coagulation section to the Molecular Diagnostics section.
